FORESITE
PATIENTCARE™

FORESITE PATIENTCARE leverages artificial intelligence to estimate patient fall risk, issue immediate alerts on detected falls, identify Hospital-Acquired Pressure Ulcer (HAPU) risk, and provide imminent bed exit alerts to allow for early, targeted clinical management.

- Provides clinical staff with early warnings about patient safety risks

- Uses machine learning to incorporate and integrate patient data to facilitate proactive nursing intervention

- HIPAA compliant system

- Clinical research shows a decrease in patient fall and hospital acquired pressure ulcer rates

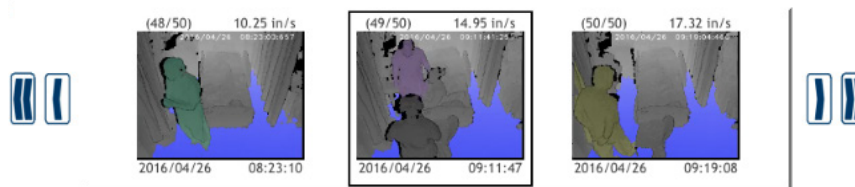

## Customer Results From Case Studies

- Based on a case study, Patientcare fall risk classification showed a high correlation with preventable fall events.

- Patientcare offers valuable data for analyzing the nature of patient falls, with the potential of individualized fall intervention for patients and targeted staff education.

Featured Benefits:
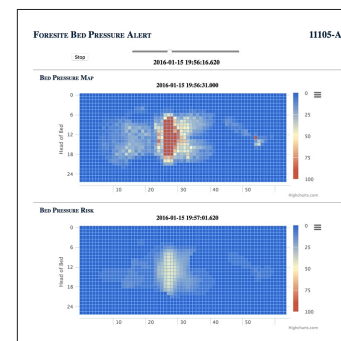

- Early Bed Exit Alert
- Pre-Fall Intervention

- Privacy Preserving Video
- Beyond Sitter Technology
- Care Plan Development Opportunities

- Fall Risk Assessment
- Fall Detection and Alerts
- Allows Post Fall Evaluation

- Hospital Acquired Pressure Ulcer Prevention
- Continuous Skin Pressure Monitoring
