FORESITE
ELDERCARE™

Foresite Eldercare™ alerts on health changes indicative of imminent illness in order to maximize independence and improve the quality of life.

ELDERCARE leverages artificial intelligence to analyze data from a noninvasive depth image sensor, bed sensor, and multiple motion sensors to anticipate care needs before they turn into a preventable injury or health condition.

This HIPAA Compliant, cost effective system goes beyond sitter technology by providing care givers with a resident's health patterns and historical trends to help detect illness in a timely manner.
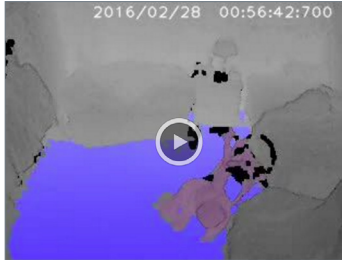

SQUARING THE LIFE CURVE™

Functional Decline

Functional Ability

• Efficient and Cost Effective Healthcare
• Increased Independence
• Improved Quality of Life

—— Current Trend

Time

.... With sensing and proactive care
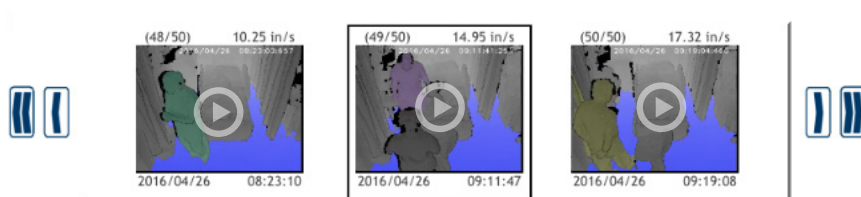

Proven Results Across the Continuum of Senior Living

• Sensor generated health alerts are shown to enhance the current care delivery model, therefore improving the overall quality of life and length of stay in an independent living setting for over two years.

• Eldercare has provided health care professionals with early illness detection alerts before a potential ER visit, with a very low false alarm rate.
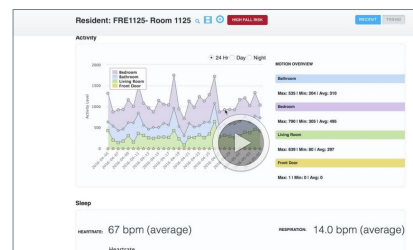

Featured Benefits:

- Fall Risk Assessment
- Fall Detection

- Early Bed Exit Alert
- Pre-Fall Intervention

- Privacy Preserving Video
- Beyond Sitter Technology
- Care Improvement

- Health Pattern Monitoring

- Illness Detection
